

## NextBus Transit Signs >>>

Each environment poses its own challenges for the presentation of passenger information. NextBus provides several options for both indoor and outdoor signage. Currently, NextBus offers three standard products that offer bright, easy-to read LED displays, suitable for wherever your riders need information. Each sign includes the same distinctive features: real-time arrival predictions, direct electronic messaging, ADA-compliant infrared audible messages and wireless communications technology. An optional push-button speaker is available.

### NextBus Rugged Transit Sign

Specifically designed for the transit shelter environment, these 18 inch signs are easily mountable in the shelter or on a pole. Made of eleven-gauge steel with a Lexan screen, the NextBus Rugged Sign has proven both vandal and weather resistant. Bright red LEDs are clearly visible from yards away. These signs bring the information directly to the rider, giving them the power to make a choice about their public transportation experience.

### NextBus Platform Sign

Transit information matters most when there are multiple routes or modes. The 6 foot Platform Sign makes real-time arrival information readily apparent, even within a crowded station or transit platform. Bright amber LEDs provide the arrival predictions in 3" high letters. The Platform sign is suitable for either indoor or outdoor spaces.

### NextBus Lobby Sign

The Lobby Sign brings passenger information indoors in an attractive 18 inch wooden case. Needing only an AC power outlet, the Lobby sign is easy to set up. Storefronts, office buildings, dormitories or anywhere else crowds gather is the perfect spot for these interior signs.

### Custom and Integration with Existing Signage

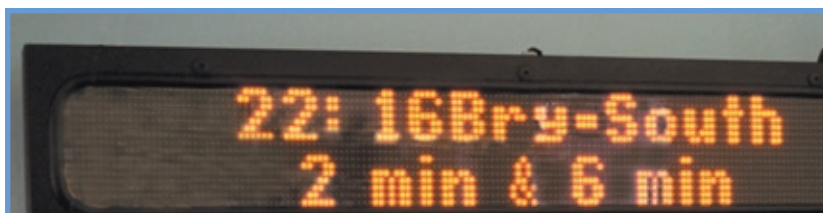

Custom signs can be designed and existing signs may be usable with the NextBus system. This includes color signs, Kiosks, and PC monitors dedicated to a specifically designed web page showing arrivals, departures, and maps on a single page.
